Skills: Node.js, Nuxt, Vue.js, Tailwind CSS, Vuetify, AngularJS, Angular, jQuery, PHP, Laravel, MongoDB, MySQL, Postgres, Elasticsearch, Browser Automation, GitHub Actions, Gitlab CI/CD, Electron.

WORK EXPERIENCE

DRUNOMICS GMBH

Frontend developer | Mar 2022 - Current

Elasticsearch, Node.js, Nuxt, Vue.js, Tailwind CSS

- Maintained an open-source Nuxt module.
- Implemented a streamlined process for distributing shared Vue components and package updates to client projects from a centralized Nuxt monorepo.
- Led the migration of our codebase from Nuxt/Vue 2 to Nuxt/Vue 3. Doing a lot of work myself and delegated some parts to other frontend devs.
- Collaborated with frontend and backend developers on internal Nuxt projects.
- I was working on a significant client project (Volkswagen InfoPortal) alongside 10 frontend and backend developers.

NAMASTREAM

Frontend developer | Nov 2020 - Mar 2021

AngularJS, Vue.js

We rewrote the existing AngularJS frontend of Namastream platform with Vue.js and added several new features along the way.

FASTCAST INFLUENCE D.O.O.

Fullstack developer | Nov 2019 - May 2020

Node.js, Vue.js, Laravel

- Improved the Fastcast platform developed with Laravel and Vue.js.
- Created multiple webcrawl scripts.

BELAK D.O.O.

Fullstack developer | Sep 2018 - Aug 2019

MongoDB, AngularJS, Node.js, Vue.js, Laravel, Angular

- Developed multiple web applications using Vue.js, Node.js (Express) and MongoDB.
- Enhanced and expanded functionality on projects built with Laravel, Node.js (Express), Vue.js, Angular, and AngularJS.
- Managed deployment process to staging and production environments using GitLab CI/CD.

ADIN D.O.O.

Fullstack developer | May 2016 - Sep 2018

PHP, JavaScript, jQuery, Node.js, Postgres, Vue.js, Laravel, Electron

At first, I worked on two main products of the company. First product is a Digital Signage platform. Main modules are for managing physical devices running our software, for creating layouts, for preview of layouts, CMS module for end users, module for monitoring physical devices and reporting/statistics module. Second product is a network of cooled parcel collection machines (Coolomat). For this project I worked on UI and required API endpoints. I also worked on multiple company's side projects.

VIZUALIS D.O.O.

Fullstack developer | Oct 2012 - Oct 2013

Java, MySQL, Adobe Flex

- I worked on the company's main product "Konfigurator", which is a visual product configurator.
- I was part of brainstorming ideas, selecting the best ones, implementing new features into the product.
- The project used Adobe Flex for frontend and Java with MySQL for backend.

PROJECTS

MOJCA GOTLIB

I've built a custom e-commerce course website for a client, on my own. From frontend (Vue/Nuxt SSR, Tailwind, Vuetify), backend (Node.js/Express, e-commerce webhooks) & backoffice (a headless CMS), to multi-layered caching & setting up self-hosted "git push to deploy" workflow. The site is up & running since 2019.
